

Mighty Mailbox Overview

Mighty Mailbox: Like having your own cape and utility belt, without the added weight.

Email, the so-called “killer app” of business communication, has become a proverbial double-edged sword. Sure, it enables your company to easily communicate with professionals inside and outside your organization, but the continuously growing problem of spam, email borne viruses, and the potential liability connected with inappropriate content puts a drain on your company’s resources and on employee productivity.

To help, Mighty Messaging is **proud** to bring you **Mighty Mailbox**, our completely managed Spam and Antivirus Solution for Growing Businesses.

**Blocks Spam by the Canful.**

Our customers get the most sophisticated solution for blocking spam and viruses — while ensuring that legitimate messages are received.

The system stops more than 97% of spam with only .5% false positives. If one of your mail messages falls into that miniscule statistic don't worry -

there are secure, sophisticated quarantine areas accessible by both an administrator and individual recipients for retrieval, so you'll never lose the important stuff.

Antivirus: Protecting your company from the Legions of (My)Doom.

With systems that are continuously updated and monitored, Mighty Mailbox protects your organization from email borne virus outbreaks (like MyDoom, Netsky and Bagle) *as they occur*. No more waiting for virus definition updates from your desktop antivirus software or for the wave of email to stop. While the rest of the world battles the forces of evil, your entire team can get back to business as usual

Content Filtering: Keeps your Secret Identity Safe, Provides a Force Field of Liability Protection

Proprietary Company information. Offensive jokes. Racial slurs. Pornography. These are just some of the risks associated with the content of select messages flowing toward and through your organization. Mighty Mailbox builds-in sophisticated content filtering, allowing you to control the flow of content into your organization based on keywords, attachment types and corporate policies. (Also available: Outbound Content Filtering.)

Email Harvest Protection: A Cloaking Device for your Organization's Email Addresses.

Sinister spammers use a technique called Directory Harvesting to find and inundate real email addresses in your organization. No matter what mail server you're running on any platform, Mighty Messaging protects against these attacks.

For organizations running Microsoft Exchange, an additional layer of protection is available, allowing only messages for real user accounts to be delivered to your mail server, reducing your required system resources and protecting your employee's email addresses..

Keeps you attached to your attachments (when you want to be.)

Flexible attachment handling enables your organization to maintain receipt of your .doc, .xls and other important files, while keeping out the nasty ones - either pure viruses and trojans or virus laden Office files.

Power in Simplicity

- **No hardware to buy, install or manage**
- **No software to buy, install or manage**
- **Continue using your existing mail server - no reconfiguration of desktop mail clients required**
- **Compatible with ALL email systems that have their own domain name, including Microsoft Exchange, Lotus Notes, Novell GroupWise, Linux and all Unix variants**
- **Works with ALL versions of desktop and server operating systems, including Microsoft Windows, Mac OS, Linux, Solaris**
- **Completely transparent to your employees - no new software to learn**
- **Reduces IT costs through decreased bandwidth usage, mail server and desktop CPU usage, mail server and desktop storage requirements and IT labor resources**
- **All of our system updates and management are done automatically at no additional cost**
- **Enterprise power - flexible settings allow for delegating administration responsibilities and controlling user and administrative access**
- **Priced for Growing Businesses**
